> Reporting and Business Intelligence

For your company to be competitive, control operating costs, and stay compliant, you need the ability to evaluate employee benefits, risk, workers' compensation, and other HR information. But if you don't have a reporting solution, managing all of your people data can be hard.

With over two decades of data management experience, Optis reporting services provide true data integration across all employee lost time for illness, absence and injury. The integration of these data sets provides a complete, holistic view of programs, which allows employers to make better business decisions.

Optis reporting services are used to capitalize on a combination of standardized reporting applications and client-configurable features, providing the information that managers need, when they need it.

FEATURES

User-configurable Web Portal

- ◉ Dashboard with key indicators brings the most vital information to the front and center of the user's attention
- ◉ User receives alerts and announcements, allowing managers to communicate effectively with their teams
- ◉ Recent reports for quick access to current information
- ◉ Online document management and data views

Low Total Cost of Ownership

- ◉ Cloud-based environment reduces cost and data risk by offering full disaster recovery managed by technology specialists
- ◉ Web platform environment requires no software or hardware investment
- ◉ Fast and efficient data procurement, configuration, and setup to realize a faster return on investment

Insights

DATA EXPERTISE

- Data is assessed, verified, and loaded behind the reporting application on a monthly or quarterly basis

- Optis provides all data vendor management

- HRIS/payroll eligibility, health plan/insurer, LTD/STD, disease management/health wellness, health PBM, workers' compensation, and legacy data are migrated quickly, smoothly, and accurately

- Online views allow the user to see all data elements in the reporting data mart at the detail level, online, in a read-only format based on their security profile

REPORT TECHNOLOGY

- Standard and custom report prompts are available with over 220 options to allow the user to configure data selection and formatting to get the reports most useful to them

- Automated report scheduling and distribution to any registered user to improve communication across departments

- A single, consistent user interface across all applications to improve administrative efficiencies

- Real-time, presentation-ready reports
